DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Group 1, claims 1-10 are drawn to a memory cell with at least two detectable states comprising a first branch series between first and second terminals of a read voltage, and said first branch includes a pre-read stage comprising, in parallel, two switchable resistors having different values with a predetermined first difference, and a programming stage that includes a polysilicon first programming resistor having a terminal accessible by a first programming circuit capable of causing an irreversible decrease in a resistance value of the programming resistor;

Group 2, claims 11-18 are drawn to a method for reading a memory cell with first and second states, comprising the steps of "driving the programmable resistance with first current and measuring first electrical quantity at the programmable resistance", "driving the programmable resistance with a second current and measuring a second electrical quantity at the programmable resistance", and "detecting first and second memory states by comparing said first electrical quantity with said second quantity";

Group 3, claims 19-23 are drawn to a memory device having first and second states memory cell that includes first and second switchable resistance legs coupled in parallel with each other and having different resistances with a predetermined first difference, a first programming resistor connected to the resistance legs and having an

Art Unit: 2827

unprogrammed, first resistance value and a programmed, second resistance value, and a first programming circuit connected to the first programming resistor and structured to cause the first programming resistor to change from the first resistance value to the second resistance value.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Viet Q. Nguyen whose telephone number is (571) 272-1788. The examiner can normally be reached on 7am-6pm (EST).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoai Ho can be reached on (571) 272-1777. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
